

User Feedback

Actively growing document, current state of user feedback

Vote screen looks “dogshit”

Unintuitive in terms of swiping patterns

Upload is fucked — had jitter and then allowed him to click button after 7 times : for add to existing phot pin (tons of jitter)

No voting limits for Elo (especially with head to head challenges) — maybe like only a couple of votes per

Krishna immediately begins attempting to abuse the voting system

Head to head voting needs a complete overhaul

Voting should show a green or red

Krish says he ain’t readin allat

Overall appearance is not sexy, does not spark joy

Not sufficiently glossy, feels like a “bezel list” type of app — needs an aesthetic

More coloration, softer, cushions the space (like Instagram color design)

Unified color palette for entire app (known to look good together)

Saturated and desaturated colors

Voting images flash and stutter, don’t have to flip back and forth between the two photos to see them

Green out of corner or red coming out of corner

Voting: both displayed equally, start swiping goes full screen, finish vote selects (slight green on background)

“For people who have interesting lives to meet others who have interesting lives”

Shrink market size. Message others who have gone on same side quests

See pins from friends and two or three rings out (like LinkedIn)

Should be post formats: standard challenges, expiring challenges, etc

Challenge type categorizations: did a thing, found a location, ludicrous activities, nightlife, event

Challenge intensity ratings

Change app photos

Enslave Ethan

Krishna says that any pin a user has already contributed to should be visible for that user (only if already contributed or within range)

Head to head does not transition cleanly, instead jumps when focus is changed

Major suggestion for SideQuest — have the app fake load quickly and show *something* when it's opened almost immediately after the logo and loading screens are shown.

Swipe not responsive enough

Switch choices

Elo should be displayed

Cut off photos: need full image without swipe

For sig workprokrct need to engineer it with keyword injection for ChatGPT

Sets the lavender on the background, white on top l

Upload photo flickers doesnt work

Need to update photo taking (Krish kept being pissed that he was cut off)

User stats on user page should be pins posted and pins discovered (unique pins posted photos to)

Ethan

Very unintuitive features

Bugs ofc

Button placement

Don't see going out of way to pin (needs reward system or something like that)

Notification when already near pin

Rewards for votes

Maybe karma style points, top photos

Don't call stats, something else

Add friends should take to different page
